

Specifications

Conditions of Sale

STANDARD: The seller's standard conditions of sale set forth in Price Sheet 150 apply, except as modified under "SPECIAL WARRANTY PROVISIONS" on page 3.

SPECIAL TO THIS PRODUCT:

INCLUSIONS: Vista Underground Distribution Switchgear features load-interrupter switches for switching 600- or 900-ampere main feeders and microprocessor-controlled arc-spinners or vacuum fault interrupters for switching and protection of 600- or 900-ampere main feeders and 200-, 600-, or 900-ampere taps, laterals, and subloops. These elbow-connected components are enclosed in a SF₆-insulated welded-steel tank, completely protected from the environment. The switchgear is available with up to six ways (bus terminals, switches and/or fault interrupters) in ratings through 38 kV and 25 kA symmetrical.

The three-position (CLOSED-OPEN-GROUNDED) load-interrupter switches are manually operated and provide three-pole live switching of 600- or 900-ampere three-phase circuits. These switches also provide a visible gap when open and internal grounding for all three phases—without exposure to medium voltage or the need to manipulate elbows. The 200-ampere, 600-ampere, or 900-ampere fault interrupters feature either arc-spinning contacts (15.5-kV, 12,500 A-symmetrical models) or vacuum interrupters in series with manually operated three-position (CLOSED-OPEN-GROUNDED) disconnects (15.5-kV, 25,000 A-symmetrical, and all 29-kV and 38-kV models) for isolation and internal grounding of each phase.

Fault interrupters provide three-pole load switching and fault interruption through 25 kA symmetrical or single-pole load switching and fault interruption through 12.5 kA symmetrical. (For other possible ratings, refer to the nearest S&C Sales Office). Fault interruption is initiated by a programmable overcurrent control. The total clearing time (from initiation of the fault to total clearing) can be as fast as 40 milliseconds. For single-pole fault interrupters, the overcurrent control can also be programmed to provide three-pole fault interruption.

Large windows provide a clear view of the open gap, ground position, and ground bus, allowing the operator to easily confirm the positions of the load-interrupter switches and disconnects of the fault interrupters. Trip indicators, which are readily visible through the windows, are provided for the fault interrupters. Each unit of gear is furnished with a manual handle to charge the operating mechanisms and open, close, and ground the load-interrupter switches and fault interrupters. The operating mechanisms operate independently of the speed of the manual handle and are designed to prevent inadvertent operation from the **Closed** position directly to the **Ground** position, and vice versa. Operating shafts are padlockable in any position and can also be padlocked to prevent operation to the **Ground** position.

Terminals are equipped with 200-ampere rated bushing wells or 600- or 900-ampere bushings (as specified). Bushing and bushing-well interfaces are in accordance with IEEE Standard 386 to accept all standard insulated connectors and inserts.

In addition, Vista Underground Distribution Switchgear has been certified as arc resistant per IEC 298 Appendix AA for fault currents up to 12.5 kA symmetrical for 15 cycles (25 kA symmetrical for units rated 25 kA short circuit). Arc resistance is standard for the pad-mounted and UnderCover™ styles. For the vault-mounted style, catalog number suffix “-N” must be specified, in which case a flange will be welded to the pressure-relief device for connection of user-supplied piping to vent exhaust gases out of the vault area.

When optional voltage indication is specified, all routine operating tasks—switching, voltage testing, and grounding—can be accomplished by a single person without cable handling or exposure to medium voltage. An optional feature that combines voltage indication with provisions for low-voltage phasing is also available. Cable testing for faults can be performed through the back of a user-supplied elbow or through a user-supplied feed thru insert eliminating the need for difficult cable handling or parking stands.

Vista Overcurrent Control 2.0

Fault interruption is initiated by a programmable overcurrent control housed in a watertight enclosure. The control is programmed using a personal computer connected to the control via a USB cable (Type A to Type A). The control receives both sensing and control inputs from current transformers. No batteries are needed for the Vista Overcurrent Control 2.0.

Current transformers provide power and input signals. The control features a variety of time-current characteristic (TCC) curves—standard “E,” “K,” and “T” speed curves, Vista coordinating-speed tap and main curves, and relay curves per IEEE C37.112-1996.

Coordinating-speed tap curves are used for fault interrupters feeding subloop taps and are specifically designed to optimize coordination with load-side weak-link/backup current-limiting fuse combinations and source-side relays with low time-dial settings. The coordinating-speed main curves are used for fault interrupters on main feeders and have a longer minimum response time and a different shape to coordinate with tap-interrupter curves. Coordinating-speed curves have phase-overcurrent, ground-protection, negative-sequence fault, and sensitive-earth fault settings.

The coordinating-speed tap and main curves, as well as IEEE and IEC relay TCC curves, can be tailored to the application using a variety of TCC curve based and definite-time settings. Ground-protection, negative-sequence fault, and sensitive-earth fault settings are also available.

Vista Switchgear Styles:

Vista switchgear is considerably smaller than traditional air-insulated gear and is available in several styles so it can be installed exactly where needed. The standard mounting styles of switchgear are as follows:

UnderCover Style

When the UnderCover Style is specified, the gear is provided with a stainless steel tank and submersible wiring.

Vault-Mounted Style

Two versions of this style are available: wet vault-mounted style is intended for vaults that are subject to periodic flooding and includes submersible wiring and electrical components. Dry vault-mounted style is intended for vaults that are not subject to periodic flooding and does not include submersible wiring and electrical components. A stainless steel tank suitable for mounting on the floor or wall of the vault is furnished with both wet- and dry vault-mounted styles.

Pad-Mounted Style

When the pad-mounted style is specified, a mild-steel or, optionally, stainless steel enclosure and tank are provided. Pad-mounted enclosures meet the requirements of ANSI C57.12.28 (enclosure integrity). The top of the pad-mounted enclosure is hinged on both sides for convenient access to the operating and termination compartments. The roof of the enclosure is sloped outward to ensure water flows away from the switchgear.

A removable panel provides access to the elbows and cables and is secured by the overlapping padlockable top. A resilient closed-cell gasket on the enclosure bottom flange protects the finish from being scratched during installation and isolates it from the alkalinity of a concrete foundation. Enclosures are protected from corrosion by S&C's Ultradur® II Outdoor Finish.

Application Notes:

Fault Interrupter

Vista Underground Distribution Switchgear features either arc-spinning contacts (15.5 kV, 12.5 kA symmetrical), vacuum fault interrupters for three-pole load switching and fault interruption through 25 kA symmetrical, or single-pole load switching and fault interruption through 12.5 kA symmetrical.

Complete ratings for the fault interrupter, as applied in Vista switchgear, are shown Table 1 on page 5. In addition to the load-dropping ratings shown, the fault interrupter is capable of interrupting transformer magnetizing currents associated with the applicable loads, as well as line-charging and cable-charging currents typical for distribution systems of these voltage ratings. The duty-cycle fault-closing rating shown for the fault interrupter defines the ability to close the interrupter the designated number of times into the **Closed** position or **Grounded** position against a three-phase fault as follows:

- **Main Contacts.** The fault-interrupter has the ability to close the designated number of times into a three-phase fault equal to rated value and interrupt the resulting short-circuit current. The fault interrupter remains operable and able to carry and interrupt its rated continuous current.
- **Ground Contacts.** The fault interrupter ground switch has the ability to close the designated number of times against a three-phase fault equal to the rated value with the ground switch remaining operable and able to carry its rated fault-closing current.

A Note on Single-Pole Switching

In single-pole switching of ungrounded-primary three-phase transformers or banks (or single-phase transformers connected line to line), circuit connections or parameters may, in some cases, produce excessive overvoltages. In particular, for the following applications above 22 kV, single-pole switching by any means should be performed only under the conditions stated in italics:

- Switching unloaded or lightly loaded delta-connected or ungrounded-primary wye-wye-connected three-phase transformers or banks (or line-to-line connected single-phase transformers), rated 150 kVA or less three-phase, or 50 kVA or less single-phase—or of any kVA rating when combined with unloaded cables or lines—where maximum system operating voltage exceeds 22 kV (*Single-pole switching should be performed only if each phase is carrying 5% load or more or if the transformer or bank is temporarily grounded at the primary neutral during switching.*)
- Switching loaded or unloaded ungrounded-primary wye-delta connected three-phase transformers or banks—alone or combined with unloaded cables or lines—where maximum system operating voltage exceeds 22 kV (*Single-pole switching should be performed only if each phase is carrying 5% load or more and if the lighting-load phase is always switched open first (or switched closed last) or if the transformer or bank is temporarily grounded at the primary neutral during switching.*)

Load-Interrupter Switch

Vista Underground Distribution Switchgear features load-interrupter switches for three-pole live switching of three-phase circuits.

Complete ratings for the load-interrupter switch, as applied in Vista Switchgear, are shown in Table 1 on page 5. In addition to the load-dropping ratings shown, the switch is capable of interrupting transformer magnetizing currents associated with the applicable loads as well as line-charging and cable-charging currents typical for distribution systems of these voltage ratings. For applications involving load current with high harmonic content (such as rectifier load currents), refer to the nearest S&C Sales Office. The duty-cycle fault-closing rating shown for the switch defines the ability to close the switch into the **Closed** or **Grounded** position the designated number of times against a three-phase fault equal to the rated value, with the switch remaining operable and able to carry and interrupt rated current.

EXCLUSIONS: Three-phase units listed in Table 2 on pages 6 through 9 do not include the switchgear style, optional features, or accessories listed in Tables 3, 4, and 5 on pages 10 through 15.

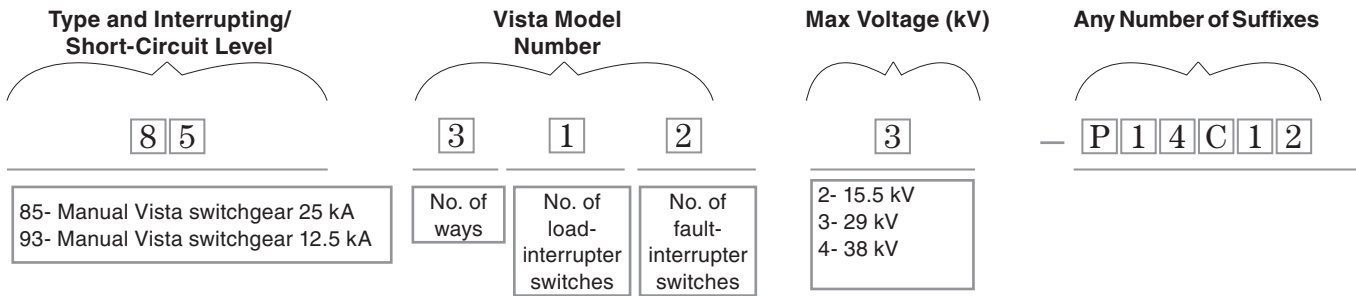

Special Warranty Provisions

The standard warranty contained in the seller's standard conditions of sale, as set forth in Price Sheets 150 and 181, applies only to Manual Vista Underground Distribution Switchgear and its associated options. The Vista Overcurrent Control 2.0 shall have the following warranty provisions: the first and second paragraphs of Price Sheet 150 warranty are replaced with the following:

- (1) General:** The seller warrants to the immediate purchaser or end user for a period of 10 years from the date of shipment that the equipment delivered will be of the kind and quality specified in the contract description and will be free of defects of workmanship and material. Should any failure to conform to this warranty appear under proper and normal use within 10 years after the date of shipment, the seller agrees, upon prompt notification thereof and confirmation that the equipment has been stored, installed, operated, and maintained in accordance with recommendations of the seller and standard industry practice, to correct the nonconformity either by repairing any damaged or defective parts of the equipment or (at the seller's option) by shipment of necessary replacement parts. The seller's warranty does not apply to any equipment that has been disassembled, repaired, or altered by anyone other than the seller. This limited warranty is granted only to the immediate purchaser or, if the equipment is purchased by a third party for installation in third-party equipment, the end user of the equipment. The seller's duty to perform under any warranty may be delayed, at the seller's sole option, until the seller has been paid in full for all goods purchased by the immediate purchaser. No such delay shall extend the warranty period.

The seller further warrants to the immediate purchaser or end user that for a period of two years from the date of shipment the software will perform substantially in accordance with the then-current release of specifications if properly used in accordance with the procedures described in the seller's instructions. The seller's liability regarding any of the software is expressly limited to exercising its reasonable efforts in supplying or replacing any media found to be physically defective or in correcting defects in the software during the warranty period. The seller does not warrant the use of the software will be uninterrupted or error-free.

Anatomy of a Vista Catalog Number

The catalog number created above represents manual Vista switchgear, 25 kA, with a total of three ways that includes one load-interrupter switch and two fault-interrupter switches for a 29-kV application. The unit will also be pad-mount style with a stainless steel outer enclosure and an olive green finish, for the auxiliary contacts on the load-interrupter way with wires routed to terminal blocks mounted in an enclosure for customer connection. (The terminal block enclosure is typically mounted on the side of the Vista switchgear tank near the overcurrent relay enclosure.)

How to Order

Complete these steps to identify the base catalog number, the appropriate options, and the product accessories needed for a complete order:

STEP 1. Obtain the catalog number of the desired switchgear unit from Table 2 on pages 6 through 9.

Catalog Number:

STEP 2. Specify the desired switchgear style from Table 3 on page 10 and add the appropriate suffix to the catalog number.

Suffix:

STEP 3. *For 12.5 kA-rated models with one or more fault interrupters:* Add a suffix designation to the catalog number indicating the desired number of three-pole and single-pole fault interrupters, selected from Table 4 on page 11. **Note:** This step is not applicable to models rated 25 kA short circuit.

Suffix:

STEP 4. Add suffix designations to the catalog number indicating the optional features desired, selected from Table 5 on pages 12 through 15. (Add as many suffixes as required.)

Suffixes:

Note: At this point, the catalog number for the Vista switchgear unit is complete. The next steps using Tables 6 and 7 are for product accessories and touch-up kit components that would be separate line items on the order. Contact S&C for additional available options.

STEP 5. Obtain catalog numbers for any accessories from Table 6 on page 16 and apply as a separate line item on the order.

Catalog Number:

STEP 6. Include touch-up kit components from Table 7 on page 16.

Catalog Number:

Example: The catalog number for an UnderCover Style Vista switchgear unit, Model 422, with all single-pole fault interrupters, rated 12.5 kA short circuit and 15.5 kV maximum at 60 Hertz, and equipped with voltage indication with provisions for low-voltage phasing is:

9 3 4 2 2 2 R 1 - U T O L 2

Note: To select and configure 40-kA Vista loadbreak switches or remote supervisory, source-transfer, or solid dielectric products, see the appropriate specification bulletin for those products.

① Refer to the nearest S&C Sales Office for other possible ratings.

② Parallel or loop switching. Fault interrupters and load-interrupter switches can switch the magnetizing current of transformers associated with the load-dropping rating. Unloaded cable switching rating: 10 amperes at 15.5 kV; 20 amperes at 29 kV and 38 kV.

③ Applicable to fault closing into closed or grounded position.

● 1200 (1200) amperes when switchgear is furnished with optional copper bus, catalog number suffix “-Z5.”

■ 600 (630) amperes when switchgear is furnished with optional 600-ampere bushings at fault interrupter terminals, catalog number suffix “-M2” or “-M3.”

▲ 900 (900) amperes when switchgear is furnished with optional 900-ampere fault interrupters, catalog number suffix “-Q1” through “-Q6,” plus an optional copper bus, catalog number suffix “-Z5.”

◆ 25 000 (25 000) amperes symmetrical three-time duty-cycle fault-closing rating; 16 000 (16 000) amperes symmetrical 10-time duty-cycle fault-closing rating.

▼ 200 (200) amperes when switchgear is furnished with optional 200-ampere bushing wells at load-interrupter switch terminals, catalog number suffix “-M4.”

⓪ 900 (900) amperes when switchgear is furnished with optional 900-ampere load-interrupter switches, catalog number suffix “-K1” through “-K6,” plus an optional copper bus, catalog number suffix “-Z5.”

① The model number defines the total number of ways, the number of load-interrupter switch ways, and the number of fault-interrupter ways. For example, a Model 431 has "4" ways in total of which "3" are load-interrupter switch ways and "1" is a fault-interrupter way.

② Refer to the nearest S&C Sales Office for other possible configurations.

③ Refer to Table 1 on page 5 for continuous, load-dropping, interrupting, and momentary ratings.

④ Welded-steel tank including components and SF₆ gas.

● These models have not been certified as arc resistant for unrestricted access. Refer to the nearest S&C Sales Office.

■ Auxiliary contacts unavailable as standard. Refer to the nearest S&C Sales Office.

⑤ The model number defines the total number of ways, the number of load-interrupter switch ways, and the number of fault-interrupter ways. For example, a Model 431 has “4” ways in total of which “3” are load-interrupter switch ways and “1” is a fault-interrupter way.

⑥ Refer to the nearest S&C Sales Office for other configurations.

⑦ Refer to Table 1 on page 5 for continuous, load-dropping, interrupting, and momentary ratings.

⑧ Welded-steel tank including components and SF₆ gas.

■ Auxiliary contacts unavailable as standard. Contact the nearest S&C Sales Office.

⑬ The model number defines the total number of ways, the number of load-interrupter switch ways, and the number of fault-interrupter ways. For example, a Model 431 has “4” ways in total of which “3” are load-interrupter switch ways and “1” is a fault-interrupter way.

⑭ Refer to the nearest S&C Sales Office for other configurations.

⑮ Refer to Table 1 on page 5 for continuous, load-dropping, interrupting, and momentary ratings.

⑯ Welded-steel tank including components and SF₆ gas.

Table 3. Switchgear Styles

Item				Suffix to be Added to Switchgear Catalog Number	Applicable to Models	Net Weight, Lbs. (Kg)
UnderCover Style. Includes stainless steel tank and submersible wiring and control housings				-U	All models	—
Dry vault floor-mounted style. Includes mild-steel tank. Does not include submersible wiring and control housings				-V3	All models	
Wet vault floor-mounted style. Includes stainless-steel tank and submersible wiring and control housings				-V4	All models	
Dry vault wall-mounted style. Includes a mild-steel tank. Does not include submersible wiring and control housings. Labels are placed to be read while the tank feet are secured to a vertical wall and the operating shafts are below the terminations				-V5	All models	
Wet vault wall-mounted style. Includes a stainless steel tank, submersible wiring, and control housings. Labels are placed to be read while the tank feet are secured to a vertical wall and the operating shafts are below the termination				-V6	All Models	
Pad-mounted style. Includes mild-steel tank and mild-steel or stainless steel pad-mounted enclosure for mounting switchgear on a pad. Does not include submersible wiring and control housings	Two-way unit	Mild-steel outer enclosure	Olive green finish	-P2	201, 210, 211, 220	360 (163)●
			Light gray finish	-P7	201, 210, 211, 220	
		Stainless steel outer enclosure	Olive green finish	-P12	201, 210, 211, 220	
			Light gray finish	-P17	201, 210, 211, 220	
	Three- or four-way unit	Mild-steel outer enclosure	Olive green finish	-P4	302, 303, 312, 320, 321, 330, 404, 413, 422, 431, 440	519 (235)●
			Light gray finish	-P9	302, 303, 312, 320, 321, 330, 404, 413, 422, 431, 440	
		Stainless steel outer enclosure	Olive green finish	-P14	302, 303, 312, 320, 321, 330, 404, 413, 422, 431, 440	
			Light gray finish	-P19	302, 303, 312, 320, 321, 330, 404, 413, 422, 431, 440	
	Five- or six-way unit	Mild-steel outer enclosure	Olive green finish	-P6	505, 514, 523, 532, 541, 550, 606, 615, 624, 633, 642, 651, 660	812 (368)●
			Light gray finish	-P11	505, 514, 523, 532, 541, 550, 606, 615, 624, 633, 642, 651, 660	
		Stainless steel outer enclosure	Olive green finish	-P16	505, 514, 523, 532, 541, 550, 606, 615, 624, 633, 642, 651, 660	
			Light gray finish	-P21	505, 514, 523, 532, 541, 550, 606, 615, 624, 633, 642, 651, 660	

● Weight includes outer enclosure and base spacer.

Table 4. Single-Pole or Three-Pole Fault Interrupting ①②③

Item	Suffix to be Added to Switchgear Catalog Number	Applicable to Models
Single-pole manual fault interrupter on all fault-interrupting ways	-T0	12.5 kA-rated models with 1 or more fault interrupters
Three-pole manual fault interrupter on one fault-interrupting way (single-pole manual fault interrupter on all other fault-interrupting ways)	-T1	12.5 kA-rated models with 1 or more fault interrupters
Three-pole manual fault interrupter on two fault-interrupting ways (single-pole manual fault interrupter on all other fault-interrupting ways)	-T2	12.5 kA-rated models with 2 or more fault interrupters
Three-pole manual fault interrupter on three fault-interrupting ways (single-pole manual fault interrupter on all other fault-interrupting ways)	-T3	12.5 kA-rated models with 3 or more fault interrupters
Three-pole manual fault interrupter on four fault-interrupting ways (single-pole manual fault interrupter on all other fault-interrupting ways)	-T4	12.5 kA-rated models with 4 or more fault interrupters
Three-pole manual fault interrupter on five fault-interrupting ways (single-pole manual fault interrupter on all other fault-interrupting ways)	-T5	12.5 kA-rated models with 5 or more fault interrupters
Three-Pole Manual Fault Interrupter on six fault-interrupting ways	-T6	12.5 kA-rated models with 6 or more fault interrupters

① Not applicable to models rated 25 kA short circuit. All 25 kA-rated models include three-pole manual fault interrupters.

② Refer to the nearest S&C Sales Office for other possible configurations.

③ For standard models, components are in the following order (from left to right) when facing the operating side of the gear: load switches, bus taps, three-pole fault interrupters, single-pole fault interrupters.

Table 5. Optional Features

Item		Suffix to be Added to Switchgear Catalog Number	Applicable to Models	
Stainless steel tank for dry vault-mounted style, wet vault-mounted style, or pad-mounted style switchgear		-S	All models	
Auxiliary contacts. Standard form open/close contact switches①②	All load-interrupter switches③	With wires routed in a bundle on tank for future customer connections	-C11●	All models
		With wires routed to terminal blocks mounted in an enclosure for customer connection (Terminal block enclosure is typically mounted on the side of the Vista switchgear tank near the overcurrent relay enclosure)	-C12■	Pad-mounted and dry-vault style models
	All fault interrupters④⑤⑥	With wires routed in a bundle on the tank for future customer connections	-C21●	All models
		With wires routed to terminal blocks mounted in an enclosure for customer connection (Terminal block enclosure is typically mounted on the side of the Vista switchgear tank near the overcurrent relay enclosure).	-C22■	Pad-mounted and dry-vault style models
Mounting provisions for fault indicators for each load-interrupter switch, fault interrupter switch, or both. Accommodates three-phase indicator with single-phase sensors⑦	For each load-interrupter switch	Without viewing window in pad-mounted enclosure	-F1	All models except 201, 302, 303, 404, 505, and 606
		With viewing window in pad-mounted enclosure	-F2	
	For each fault-interrupter switch	Without viewing window in pad-mounted enclosure	-F3	All models except 210, 220, 320, 330, 440, 530, 540, 550, 660
		With viewing window in pad-mounted enclosure	-F4	
Potential indication with test feature. Includes LCD display to indicate presence of voltage on each phase, and solar panel to supply power for testing of complete voltage-indication circuit and phasing circuit (if furnished). One potential indicator is provided for each bus-terminal, load-interrupter switch, and fault-interrupter way		Without provisions for low-voltage phasing	-L1	All models
		With provisions for low-voltage phasing	-L2	
Spanish labels		-L51	All models	
Portuguese labels		-L52	All models	
International crating⑧		-L71	All models	

① Order auxiliary contacts for planned future manual to remote supervisory conversions. Field retrofit of the auxiliary contacts is not possible. See similar recommendation for Remote Low-Pressure Alarm feature for suffix options "-R11", "-R12", and "-R2." For Models 303 and 505, contact the nearest S&C Sales Office.

② If auxiliary contacts are specified for both load-interrupter switches and fault interrupters, both options must have the same termination style.

③ Provides verification of **Closed/Open/Grounded** blade position.

④ On three-pole fault interrupters, auxiliary contacts provide indication of **Closed/Open/Grounded** blade position, as well as trip indication.

⑤ Not available with single-pole fault interrupters (catalog option "-T0") for models with catalog numbers ending in "R1."

⑥ For single pole fault interrupters, on Vista switchgear models rated 29 kV and 38 kV, auxiliary contacts only provide trip indication.

⑦ Catalog number suffix "-F1" and "-F3" may be selected together or separately; "-F2" and "-F4" may also be selected in the same manner. No mixed combination of "-F1" or "-F3" with "-F2" or "-F4" is permitted.

⑧ Wood products used in packaging are either hardwood or certified by the wood supplier as being "heat treated" (kiln dried) to a core temperature of 133°F (56°C) for a minimum of 30 minutes.

● Not available with option "-R2," "-C12," or "-C22."

■ Not available with option "-R11," "-C11," or "-C21."

TABLE CONTINUED ►

Table 5. Optional Features—Continued

Item		Suffix to be Added to Switchgear Catalog Number	Applicable to Models
900-ampere load-interrupter switch ^⑨ ^⑩ ^⑪ ^⑫ on	Way 1	-K1	All models rated 25 kA
	Way 2	-K2	
	Way 3	-K3	
	Way 4	-K4	
	Way 5	-K5	
	Way 6	-K6	
900-ampere fault interrupter ^⑨ ^⑩ ^⑪ ^⑫ on	Way 1	-Q1	
	Way 2	-Q2	
	Way 3	-Q3	
	Way 4	-Q4	
	Way 5	-Q5	
	Way 6	-Q6	
600-A bushings <i>without</i> studs, at load-interrupter switch and bus terminals (in lieu of standard 600-A bushings <i>with</i> studs)		-M1	All models rated 12.5 kA
600-A ^⑬ bushings <i>without</i> studs, at load-interrupter switch, fault interrupter, and bus terminals (in lieu of standard 600-A bushings <i>with</i> studs)		-M1	All models rated 25 kA
600-A bushings at fault-interrupter terminals (in lieu of 200-A bushing wells)	<i>Without</i> studs	-M2	All models rated 12.5 kA except Models 210, 320, 330, 440, 550, and 660.
	<i>With</i> studs	-M3	
200-A bushing wells at load-interrupter switch and bus terminals (in lieu of 600-A bushings <i>with</i> studs)		-M4	All models rated 12.5 kA except Model 201 ^⑭
Arc resistance for vault-mounted style (arc resistance is standard for pad-mounted and UnderCover styles), per IEC 298 Appendix AA, for arcs occurring internal to the tank (15 cycles, 12 kA symmetrical for 12.5-kA rated models and 15 cycles, 25 kA symmetrical for 25-kA-rated models)		-N	All models with catalog number suffix "-V3," "-V4," "-V5," or "-V6"
Two-hole ground pad, one per way, located below bushings or bushing wells (in lieu of standard one ground pad per tank)		-O	All models
Remote low-pressure alarm ^⑮ —includes internal contact for remote low-pressure indication, with wiring to outside of tank	With wires routed in a bundle on the tank for future customer connections	-R11▲	All pad-mounted and dry vault-mounted styles
		-R12	All UnderCover and wet vault-mounted styles
	With wires routed to terminal blocks mounted in an enclosure for customer connection. (Terminal block enclosure is typically mounted on the side of the Vista switchgear tank near the overcurrent relay enclosure)	-R2◆	All pad-mounted and dry vault-mounted styles

⑨ 900-ampere cable connectors must be used.

⑩ If piggybacked cable connectors are desired, refer to the nearest S&C Sales Office.

⑪ Copper bus, catalog number suffix "-Z5," must be specified if 900-ampere load-interrupter switches and/or 900-ampere fault interrupters are specified.

⑫ If any "-K" or "-Q" suffix options are selected, any bus tap ways and terminals are also rated 900 amperes.

⑬ Bushings are rated 900 amperes on ways furnished with 900-ampere load-interrupter switches (catalog number suffix "-K1" through "-K6") and/or 900-ampere fault interrupters (catalog number suffix "-Q1" through "-Q6").

⑭ Model 201 is furnished with 200-ampere bushing wells at bus terminals as standard.

⑮ Must be specified if remote supervisory features such as remote low-pressure indication are planned.

▲ Not available with option "-C12" or "C22."

◆ Not available with option "-C11" or "-C21."

Table 5. Optional Features—Continued

Item		Suffix to be Added to Switchgear Catalog Number	Applicable to Models
Key interlocks. Locks load-interrupter switch or three-pole fault interrupter (catalog number suffix “-T1” through “-T6”) in the Open position ⑰⑱	Way 1	-X1	Any in which Way 1 is a load-interrupter switch or three-pole fault interrupter
	Way 2	-X2	Any in which Way 2 is a load-interrupter switch or three-pole fault interrupter
	Way 3	-X3	Any in which Way 3 is a load-interrupter switch or three-pole fault interrupter
	Way 4	-X4	Any in which Way 4 is a load-interrupter switch or three-pole fault interrupter
	Way 5	-X5	Any in which Way 5 is a load-interrupter switch or three-pole fault interrupter
	Way 6	-X6	Any in which Way 6 is a load-interrupter switch or three-pole fault interrupter
Provisions for future key interlocks. Includes welded mounting blocks and locking shaft position indicators for future installation of key interlocks on load-interrupter switches or three-pole fault interrupters ⑰⑱⑲	Way 1	-X19	Any in which Way 1 is a load-interrupter switch or three-pole fault interrupter
	Way 2	-X29	Any in which Way 2 is a load-interrupter switch or three-pole fault interrupter
	Way 3	-X39	Any in which Way 3 is a load-interrupter switch or three-pole fault interrupter
	Way 4	-X49	Any in which Way 4 is a load-interrupter switch or three-pole fault interrupter
	Way 5	-X59	Any in which Way 5 is a load-interrupter switch or three-pole fault interrupter
	Way 6	-X69	Any in which Way 6 is a load-interrupter switch or three-pole fault interrupter
Copper bus⑳		-Z5	All models

⑰ Motor operators can not be retrofitted onto ways with key interlocks.

⑱ The portable motor operator accessory cannot be used on ways with key interlock mounting provisions or key interlocks. Permanent-style motor operators for remote supervisory Vista switchgear cannot be retrofitted onto ways with key interlocks or key interlock mounting provisions.

⑲ Key interlock mounting provisions cannot be added after shipment. Only switchgear with ordered key interlock mounting provisions can be field equipped with key interlocks.

⑳ Main bus can be rated up to 1200 amperes when catalog number suffix “-Z5” is specified.

Table 6. Accessories

Item	Catalog Number	
Shotgun clamp sticks for use with separable connectors	6-foot–5½-inch (197-cm) length	9933-150
	8-foot–5½-inch (258-cm) length	9933-151
Storage bag for shotgun clamp sticks, heavy canvas	6-foot-6-inch (198-cm) length	9933-152
	8-foot-6-inch (259-cm) length	9933-153
Portable motor operator ^① for operation of load-interrupter switches and single- or three-pole fault interrupters from a remote location. Includes carrying case, and 50-foot (1524-cm) cable with remote controls. Power supplied by: ^②	User-furnished 24-Volt battery and battery charger	38320R1
	S&C-furnished 24-Volt battery and battery charger	38322R1
	S&C-furnished ac input power supply	38323R1
Pentahead socket, for ½-inch drive	9931-074	
Vista overcurrent control 2.0 connection cable. For connecting control to user PC for programming and status information. This 2-meter (6.6-foot) long cable includes USB Type A-to-Type A connection.	TR-11887	
UV protection canopy	Vista switchgear 4-way–6-way	CUA-9514-1
	Vista switchgear 2-way–4-way	CUA-9514-2

① If a customer wants to use a Portable Motor Operator on a unit with key interlocks, a custom design is required. Contact sales support or product marketing for more details.

② When ordering a portable motor operator for use on an "-R1" (next generation) Vista switchgear unit, also order a 6-inch (152-mm) base spacer and specify a cutout top rail on the order.

Table 7. Touch-Up Kit Components—Aerosol Coatings in 12-Ounce Cans

Item	Catalog Number
S&C light gray outdoor finish	9999-080
S&C olive green (Munsell 7GY3.29/1.5) outdoor finish	9999-058
S&C red-oxide primer	9999-061
